AIR-SLIDE CONVEYING AND SLIDE GATES

Air-Slide Conveyors are used for moving fine grained material at high capacities. Air-Slides are mainly used to transport material and a slight decline to multiple outlets. Materials which are commonly moved with Air-Slides are Fly Ash, Alumina, Phosphates, Silica, and Cement. The Air Chamber is fluidized allowing a high speed high capacity conveying action.

PRODUCTS COMMONLY CONVEYED

Fly Ash
Alumina
Phosphates
Silica
Cement

Slide Gates are custom built by AM Manufacturing with over 35 years of Material Handling Experience. Slide gates are a very efficient way of controlling the flow of material from one place or direction to another when desired.
